

VICI meeting 29/06/2009

Present: Willem Paul, Joost, Wietske, Alina, Pascal

Absent: Dmytro, Catholijn, Koen

Agenda:

1. HuCom
2. Case Studies
3. FaceGen demo
4. Questionnaire
5. Other topics

1. Willem Paul explains that the next HuCom should be held as a workshop at IUI 2010 in Hong Kong. We will submit a workshop proposal. The workshop will basically be an HCI oriented paper session. We will ask Pearl Pu from the HCI group in Lausanne (Ecole Polytechnique Federale de Lausanne) to help us organize the workshop. The deadline for submission is in September.

2. Joost mentions that he has gathered data from 3 interviews and 3 diaries from the case studies. We discussed that the data will be analyzed using Grounded Theory. We will try to use a software package for qualitative data analysis called NUDIST for that.

3. Joost also gives a demo of the FaceGEN software which can be used to model the heads of avatars. They can be imported to the Vizard software as well and then be used in our training scenarios.

4. Alina mentions that she translated the social acceptability question to English. There are 3 versions online of the questionnaire now: dutch with videos, dutch with storyboards and English with storyboards. At this moment we have 51 respondents in total: 18 for the 1st version, 5 for the 2nd version and 28 for the English version. We are planning to have all data collected by Mid August so that we can analyse the data afterwards and write a paper for CHI 2010.

5. Other topics/things people are working on are:

Alina: just finished white paper, preference elicitation interface

Wietske: CLIMA paper, preparation for the AI course starting in September, white paper.
